

We invented plastic push-fit plumbing. So who better to re-invent it?

The biggest thing to happen to plastic push-fit plumbing since we invented it over 30 years ago, the new, technologically advanced next generation Hep₂O range is here.

Packed with new features.

Packed with revolutionary unique new features, like **In4Sure™** joint recognition that actually tells you when the pipe's fully inserted and the **HepKey™** demounting system that provides super-secure but fully demountable joints, Hep₂O is quicker, more reliable and easier to use than ever before.

And while the fittings are all totally new, it's still the same easy to work with pipe plumbers know and love. We've just changed the colour to white.

The unique Hep₂O 50 year guarantee.

To ensure the new range has the levels of reliability the trade is looking for, the new range of fittings are put through their paces at our world-leading fully accredited testing facility. Only when they have proved themselves under peak heat, load and pressure tests are we happy to give them our unique, industry-leading **50 year guarantee**. So you can relax because the chances are the next generation Hep₂O plastic push-fit plumbing system will be working long after you've retired!

Same great pipe – now in white.

Not everything has changed. The much-praised Hep₂O pipe remains the same, all except for the colour. It's still exceptionally flexible and still comes off the coil in straight useable lengths that can easily be cabled into position. The only thing that's changed is the colour. Now in white to match the new fittings, exposed areas of pipe work now look clean and more attractive.

It was tough, but the industry-leader has just got better.

In4Sure™

Groundbreaking new joint recognition technology tells you when the pipe's in.

Here's how it works

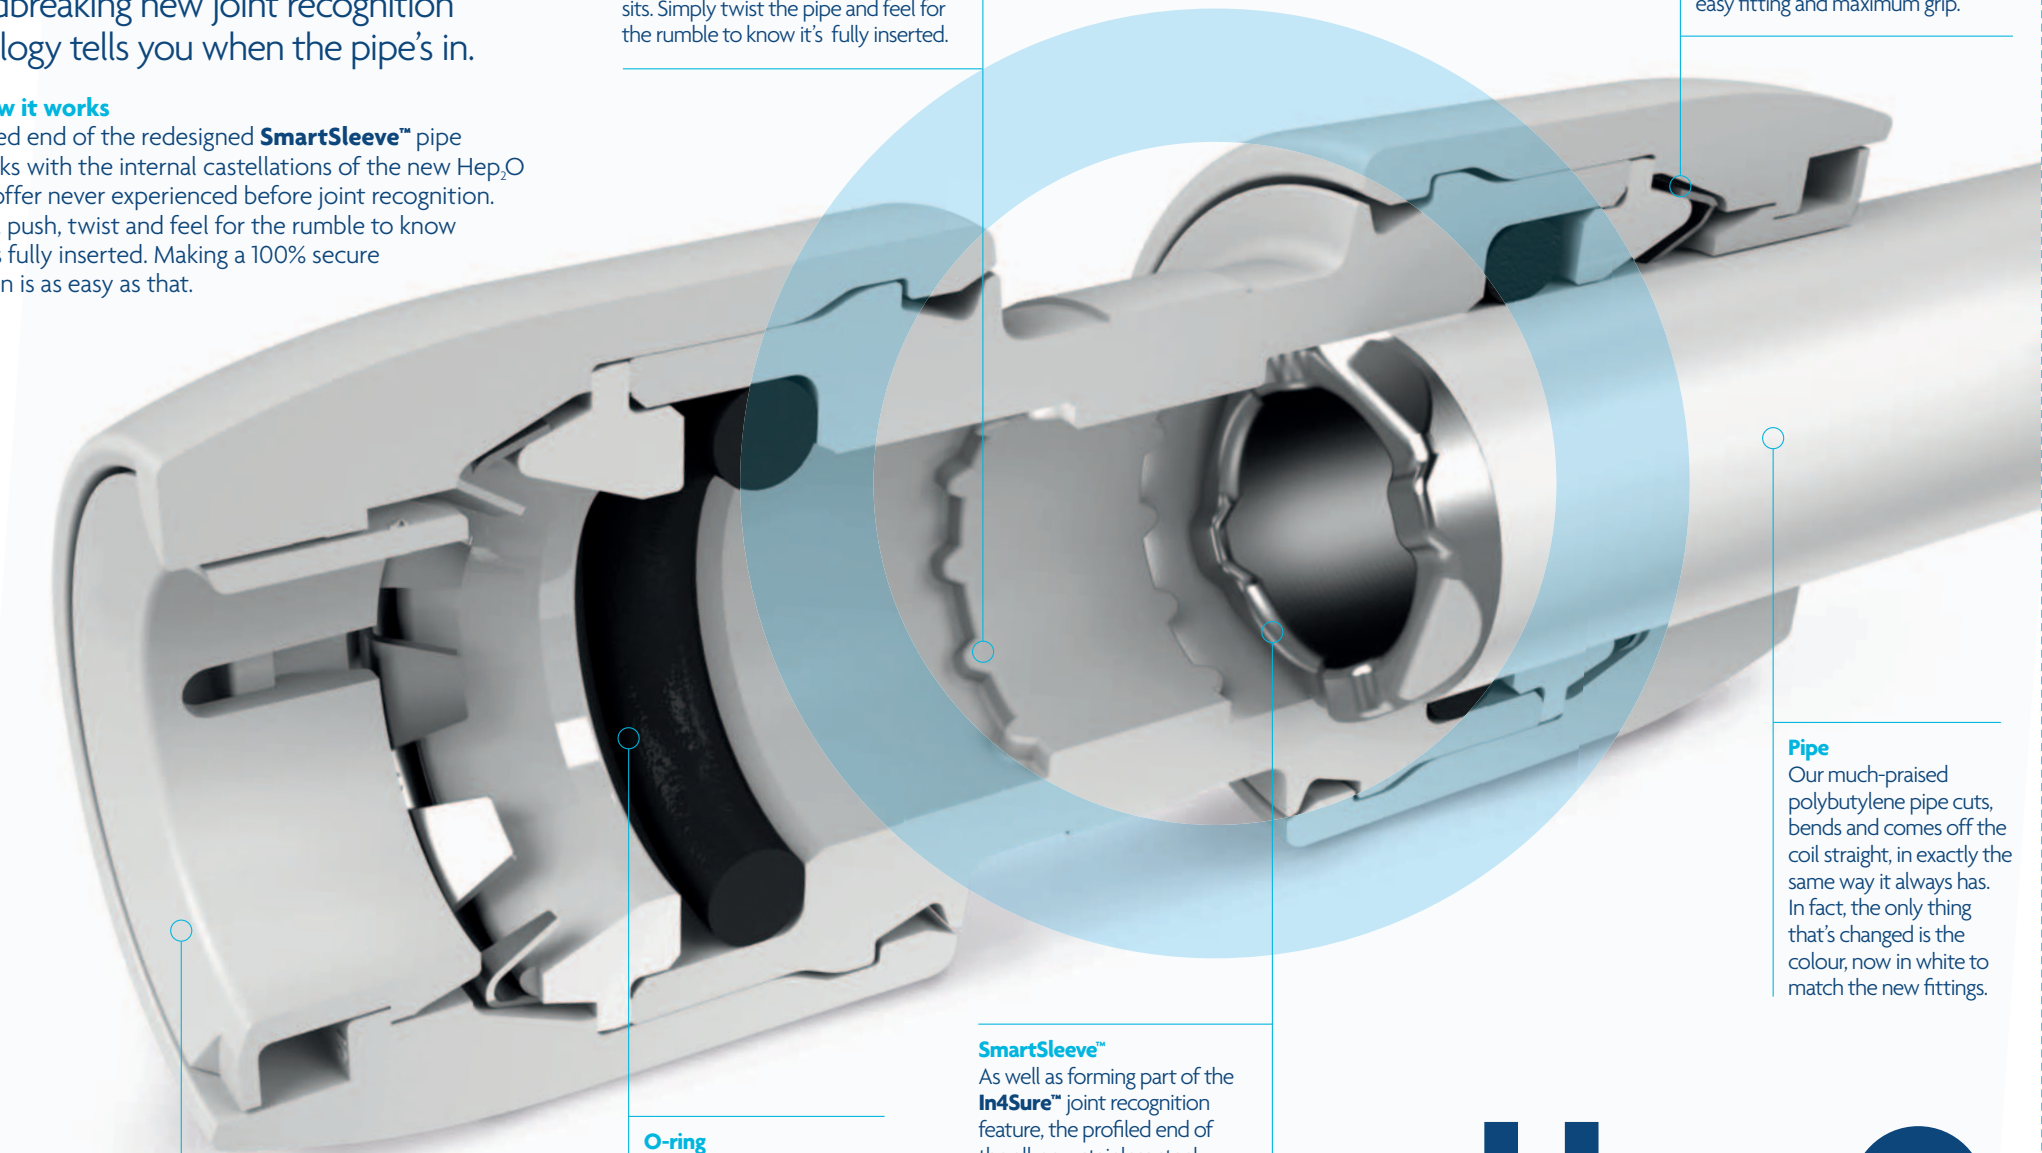

The profiled end of the redesigned **SmartSleeve™** pipe insert works with the internal castellations of the new Hep₂O fitting to offer never experienced before joint recognition. Just insert, push, twist and feel for the rumble to know the pipe is fully inserted. Making a 100% secure connection is as easy as that.

Internal castellations

New **In4Sure™** joint recognition technology lies right at the heart of our new fitting. The moulded internal castellations form the seat in which the profiled end of the new **SmartSleeve™** sits. Simply twist the pipe and feel for the rumble to know it's fully inserted.

Grab-ring

Made from high quality 316 stainless steel, the re-engineered grab-ring is amazingly strong. Able to grip plastic and copper pipe, the carefully angled teeth have been aligned for easy fitting and maximum grip.

Hep₂O fitting

The new white sleek fitting not only looks more attractive, it's super-tough.

O-ring

The all-important o-ring offers a reliable seal in both hot and cold water systems.

SmartSleeve™

As well as forming part of the **In4Sure™** joint recognition feature, the profiled end of the all-new stainless steel **SmartSleeve™** reduces the force required to make a secure connection. It also stays in the pipe when demounted.

Pipe

Our much-praised polybutylene pipe cuts, bends and comes off the coil straight, in exactly the same way it always has. In fact, the only thing that's changed is the colour, now in white to match the new fittings.

Hep₂O

Next Generation

Try the next generation Hep₂O for free.

Get your **FREE Test Pack** now.

The best way to experience just how much time and effort the new Hep₂O range will save you is to try it out. And the best way to do that is with a free test pack which contains a next generation Hep₂O fitting, a length of pipe, a **SmartSleeve™** pipe insert sleeve and a **HepKey™** – in fact all you need to try out the new features.

Getting hold of yours couldn't be easier. Simply fill in your details on the attached card and send it back to us. No stamp required. Or you can go to www.hep2o.co.uk/dlf click on **FREE Test Pack** and request your pack online (*one pack per address*).

We look forward to hearing from you.

Register online or fill in this form and claim your **FREE Hep₂O Test Pack.**

HepKey™

The innovative pipe release key that only demounts when you want it to.

Colour-coded to the pipe size, it works with the new Hep₂O fittings. The **HepKey™** triggers the grab-ring within the fitting to release the pipe. As the fitting is tamper-proof, the pipe will only release when you want it to. So it's fast, simple and eliminates the risk of accidental and potentially expensive demounting.

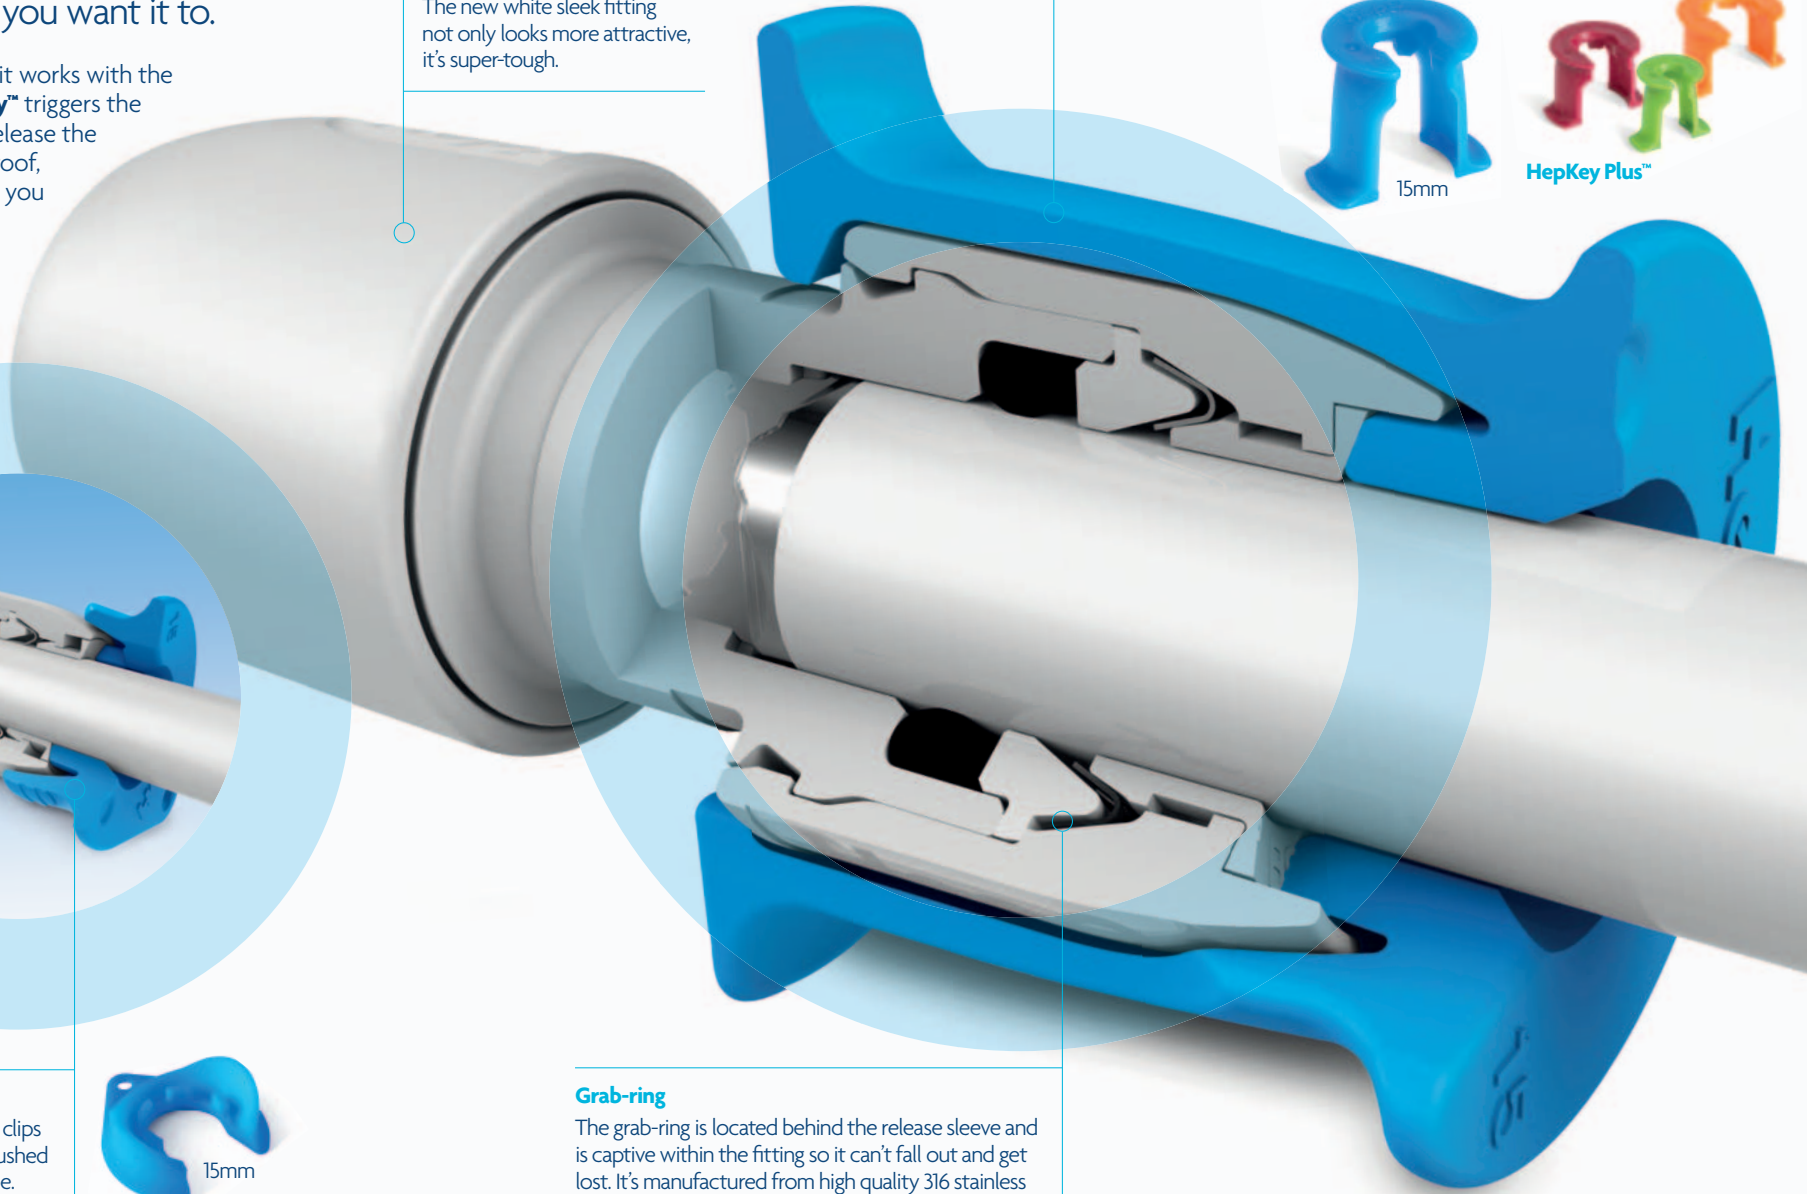

HepKey™
The smaller pocket-sized **HepKey™** clips around the pipe and needs to be pushed against the fitting to release the pipe. Quick and easy to use and it achieves demounting with the minimum of effort.

Hep₂O fitting
The new white sleek fitting not only looks more attractive, it's super-tough.

HepKey Plus™
Available in each of the four fitting sizes, **HepKey Plus™** simply clips onto the fitting. This simple action depresses the inner collar which releases the integral grab-ring and allows the pipe to be removed.

Grab-ring
The grab-ring is located behind the release sleeve and is captive within the fitting so it can't fall out and get lost. It's manufactured from high quality 316 stainless steel that can be used repeatedly without any loss of strength so the fitting can be used and re-used.
